Telemedicine

*Sit in the comfort of your
home and speak with your
doctor on a secure line!*

Dr. Andrea Purcell, NMD

What Is Telemedicine?

Advancements in technology have allowed Medicine to be offered in a new way.

Telemedicine is a 2 way audio/video conference with your doctor that occurs at a distance. You can **sit in the comfort of your home and speak with your doctor** confidentially on a secure line.

To participate in Telemedicine **all you need is a computer with a video camera and a high speed internet connection.**

When you use telemedicine, you increase your access to your doctor, wherever and whenever you need to.

It all boils down to better service without compromise.

Who Can Benefit from a Telemedicine Appointment?

1. New and existing patients
2. Patients who are feeling too sick or too tired to leave home
3. Patients who live far away and want to avoid a long commute
4. Busy moms
5. College students away at school
6. Having a health crisis while on vacation? That's no problem with Telemedicine!

The Benefits Are Endless...

You get to see the specialist you want, in your home, saving you time and energy.

What Patients Are Saying About Telemedicine?

"I think the Telemedicine appointments work great. Sound quality is better than over the phone, and as long as there's a reliable connection, it's far superior to phone. Also it's easier if she had to see something, and there's a chat function so she can type out long and technical stuff if the patient needs it." -Jay K.

"The Telemedicine appointment seemed to be just as effective as an in person appointment. It was much better than a phone appointment in my opinion but just as convenient." -Brenda J.

"I loved the telemedicine option. For me, it was distance. I can benefit from her expertise without the hour's commute each way." -Jean L.
